DETAILED ACTION

The amendment filed 4/15/2010 has been entered.

The finalty of the Office Action mailed 12/15/2009 has been withdrawn.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2. Claims 23-41 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The applicant fails to adequately describe the meaning of "3 to 10," since integers has been deleted from the claims and it is unclear if applicants now contemplate fractional values. Appropriate correction is needed.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 23-41 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term "3 to 10" is indefinite because it is unclear if the integers are encompassing fractional values due to the deletion of the term "integers" in the claims. Also, pertaining to the R² groups in claim 28, it is unclear how

Art Unit: 1796

the m value (3 to 10 range) allows for the presence of the mandated unsaturated groups at the upper end of the range. Appropriate correction is needed.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1796

8. Claims 23-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over **CARPENTER** et al. (U.S. Patent Application Publication 2003/0153787, hereinafter **CARPENTER**) in view of **BLOOM** et al. (U.S. Publication Application 2003/0187103, hereinafter **BLOOM**).

9. Regarding claims 23-31, **CARPENTER** teaches compounds of the formula (1): $\mathbb{R}^2 [(AO)_n.\mathbb{R}^3]_m$

Where: R^2 is the residue of a groups having at least m active hydrogen atoms derived from hydroxyl and/or amino and/or amido groups; AO is an alkylene oxide residue; each n is independently from 2 to 200; m is 2-10; and each R^2 is the residue of a group having at least m active hydrogen atoms derived from hydroxyl and/or amino and/or amido groups. R^3 is H, hydrocarbyl, particularly a C_1 to C_{22} alkyl or alkenyl. [0004-0013]. R^3 is H; hydocarbyl; particularly C_1 to C_{22} alkyl or alkenyl; a long chain alk(en)yl succinic acyl group of the formula: $C_1 = C_1 + C_2 + C_2 + C_3 + C_3 + C_4 + C_4 + C_5 + C_5$

One of R and R¹ in the succinic moiety is C₈ to C₂₂ alkenyl or alkyl and the other is hydrogen, and Y is a group OM where M is hydrogen, metal ammonium, amine especially alkylamine (including alkanolamines), or Y is NR⁴R⁵ where R⁴ and R⁵ are each independently hydrogen, a hydrocarbyl, particularly alkyl group, including substituted alkyl, particularly hydroxyl substituted hydrocarbyl, especially polyhydroxy hydrocarbyl, such as hydroxyl substituted and especially polyhydoxy substituted alkyl, groups; a long chain acyl group -OC.R⁶ is along chain hydrocarbyl group, particularly a

Application/Control Number: 10/583,085

Art Unit: 1796

C₈ to C₂₂ alkyl or alkenyl group [0018-0029] (which would satisfy the acyl group). Also, suitable <u>hydrocarbyl groups</u> include lower alkyl groups, e.g., C₁ to C₆ alkyl groups such as methyl or ethyl groups, acting as chain end caps for one or more of the polyalkylene oxide chains mainly to alter the degree of hydrophilicity of the compounds, and longer chain <u>alkyl or alkenyl groups e.g. C₈ to C₂₂ and particularly C₁₆ or longer, alkyl or alkenyl groups such as lauryl, oleyl and stearyl groups or mixed alk(en)yl groups derived from <u>natural fats or oils [0067]</u>. Furthermore, **CARPENTER** teaches R¹ is the residue of sorbitol, which is a monosaccharide [0055] (as required by claim 24-26). However, **CARPENTER** does not teach the hydrocarbyl group comprising at least two ethylenic double bonds.</u>

Page 5

10. In the same field of endeavor of a latex paint composition, **BLOOM** teaches polyunsaturated fatty acid containing additives from vegetable oils (Abstract). Also, the latex paint composition contains a polyunsaturated fatty acid or derivative thereof chemically attached to an alcohol, the chemical attachment is through an ester, ether or urethane linkage [0050]. The term "polyunsaturated fatty acid or derivative thereof" as used herein refers to a polyunsaturated fatty acid moiety or an ester, ether, carbamate or amide derived from said polyunsaturated fatty acid moiety. Examples of a polyunsaturated fatty acid or a derivative thereof include polyunsaturated fatty acid mono-ester of glycols, such as linoleic acid mono-ester of ethylene glycol and linoleic acid mono-ester of propylene glycol [0067]. The polyunsaturated fatty acid derivative behaves as a nonionic surfactant [0070] in latex paint composition.

Application/Control Number: 10/583,085

Art Unit: 1796

11. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to utilize the polyunsaturated fatty acid of **BLOOM** with the surfactant composition of **CARPENTER** for the benefit of reducing or eliminating the need for traditional water soluble additives that lower the water resistance of dry paint film and the polyunsaturated fatty acid moieties are capable of oxidative crosslinking during the curing process, forming a dry paint film that is more durable and water-resistant than traditional latex paint compositions.

Page 6

- 12. Regarding claims 32 and 33, **BLOOM** teaches polyunsaturated fatty acid such as linoleic acid therefore the properties are intrinsic.
- 13. Regarding claim 34, **BLOOM** teaches linoleic acid (which satisfies two ethylenic double bonds). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to optimize the proportions of fatty acids through routine experimentation for best results. As to optimization results, a patent will not be granted based upon the optimization of result effective variables when the optimization is obtained through routine experimentation unless there is a showing of unexpected results which properly rebuts the prima *facie* case of obviousness. See *In re Boesch*, 617 F.2d 272,276,205 USPQ 215,219 (CCPA 1980). See also *In re Woodruff* 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936-37 (Fed. *Cir.* 1990), and *In re Aller*, 220 F2d 454,456,105 USPQ 233,235 (CCPA 1955).
- 14. Claims 35-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over **CARPENTER** et al. (U.S. Patent Application Publication 2003/0153787, hereafter

Application/Control Number: 10/583,085

Art Unit: 1796

CARPENTER) in view of **BLOOM** in further view of **BOUVY** et al. (U.S. Patent No. 6,780,910, hereinafter **BOUVY**).

Page 7

- 15. Regarding claims 35-41, the combined disclosures of **CARPENTER** and **BLOOM** are considered to render the invention of claim 1 obvious, see paragraph 9, however, the combined disclosures fail to teach an aqueous emulsion or dispersion of polymeric particles wherein the emulsion or dispersion is formed in the presence of a stabilizing amount of a mixture of compounds represented by formula I.
- 16. Regarding claims 35-41, **BOUVY** teaches an aqueous emulsion or dispersion of polymeric particles comprising a compound of formula (I) as defined in clam 35 (Abstract; Col. 1, lines 54-67; Col. 4, lines 57-67) (as required by claim 36. BOUVY teaches an aqueous emulsion or dispersion of polymeric particles wherein the polymeric particles comprise an alkyd resin (Abstract; Col. 1, lines 55-67; Col. 4, lines 40-55) (as required by claim 37). Also, **BOUVY** teaches the alkyd resin is a resin which is the reaction product of (i) one or more polybasic organic acids or anhydrides, (ii) one or more monobasic fatty acid and one or more polyhydric alcohols (Col. 2, lines 52-60) (as required by claim 38). Furthermore, **BOUVY** teaches an aqueous emulsion of an alkyd resin which includes as an emulsifier a compound of formula (1) as defined in claim 1 in combination with an anionic surfactant, particularly an ether carboxylate, an alkyl aryl sulphonate, a phosphate ester, an alkyl ether sulfate, or a mixture of these surfactants, where the weight ratio of compound(s) of the formula (1) to anionic surfactant is in the range 90:10 to 10:90 (Column 3, lines 11-46) (as required by claim 39). BOUVY teaches a method of making an aqueous emulsion of an alkyd resin which comprises

forming a mixture of the resin and surfactant, including at least one compound of formula as defined in claim 35, including water in the mixture to form a water-in-oil emulsion, and subsequently adding water to the water-in-oil emulsion at least until the emulsion inverts to form an oil disperse phase content of the emulsion to that desired (Column 5, lines 1-9) (as required by claim 40). **BOUVY** teaches polyester resins are well known with wide uses in surface coating such as paints (Column 1, lines 14-15) (as required by claim 41).

17. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have an aqueous emulsion or dispersion as taught by **BOUVY** with the surfactant compositions of **CARPENTER** and **BLOOM** for the benefit of producing alkyd resin emulsions which exhibits excellent properties in surface coatings.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DEVE VALDEZ whose telephone number is (571)270-7738. The examiner can normally be reached on Mon-Thurs, 7:30pm-5:00pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on (571) 272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
